

Sinopsis

This book is a response to the need for a holistic solution to the problems associated with values-less conducts in business by proposing frameworks for the values-based innovative and entrepreneurial conducts in organizations, particularly from the Islamic worldview. It contains chapters that examine the concepts of innovation and entrepreneurship from the Islamic worldview, principles and concepts. The aim is to bring to light important Islamic ethical constructs that define the concepts of innovation behavior and entrepreneurship in business. The book begins by identifying research gaps within the conventional innovation and entrepreneurship literature, which the chapters the books undertake to address. Through the five chapters of this book, the authors deliberate on the dimensions of firm growth, the behavioural and psychological aspects of innovation and entrepreneurship conduct, as well as the innovation process and systems. The values-based constructs and models presented in this book not only bring Islamic worldview and values concepts into the mainstream management literature, but also enrich the existing values based literature. The book's focus on the values-based concepts further broadens the reader's perspective on the business and entrepreneurial conduct. The book is positioned for advance-level undergraduate and postgraduate students, researchers, academicians, as well as practitioners. The materials are suitable as supplementary readings for courses on Innovation and Entrepreneurship, Management of Organization, and Management from the Islamic Perspective.
